Comprehension:

Read the following passage and answer the questions that follow.

NEW DELHI: His seat belt tightly strapped to his body and his hands firmly on the steering wheel, Jai Kumar looks tense as he waits in a Maruti Ertiga at the Indira Gandhi International Airport. Today, a man's life depends on his driving skills – he has to transport a beating heart from the airport to All India Institute of Medical Sciences (AIIMS) where a transplant is scheduled in an hour.

The Delhi Traffic Police have arranged a 'green corridor' – a special route that will give Kumar an uninterrupted passage during the peak traffic hour in the morning. But still, there is no margin of error.

"I have driven in a green corridor once before, but I cannot get rid of the fear of getting stuck in a traffic jam," says Kumar. The conversation is cut short midway as a doctor carrying a heart in an organ preservation box hurriedly emerges from the airport and paces towards the waiting vehicle.

The route is not very different from a VIP movement corridor – a familiar irritant in Delhi – but causes barely five minutes of inconvenience to other motorists along the route. Escorted by three police vans and four motorcycles – sirens blaring constantly and traffic officers on the way frantically waving aside obstructing vehicles – the vehicle hits speeds of up to 100 km per hour to cover a 14km journey in 12 minutes.

In the end, a patient undergoes a successful heart transplant.

This is no longer a rare occurrence in the National Capital Region (NCR). What began with a celebrated 32 km journey in 29 minutes from a Gurgaon hospital to one in South Delhi's Okhla in January 2015 has now become a regular way of saving lives.

Since January 2017, traffic police have arranged 44 green corridors in Delhi at an average of over two such trips every month. "On each occasion, a life was saved," says Alok Kumar, Joint Commissioner of Police (Delhi Traffic Police), proud of the fact that every green corridor has been managed successfully.

Kumar says that never has a request for a green corridor been turned down. "We can arrange green corridors within 30 minutes of intimation. There is no margin for error," says Kumar.

These special corridors are necessary to transport organs such as hearts, livers, kidneys or eyes after harvesting them from a dying or brain-dead person to a patient in another hospital.

Time is of utmost importance in these transplants. A heart, for example, needs to be transplanted within four hours — the earlier the better, to improve the chances of success.

"It takes six-seven minutes to harvest a heart. Another two-three minutes are lost in placing the organ in a bag and rushing it to the ambulance. Transplanting the heart into the receiver's body takes 40-60 minutes. We have three hours for transporting the heart from one hospital to another, so we focus on saving time there," says Dr Kewal Krishan, Director of Heart Transplants at Max Super Speciality Hospital.
